Table 3

The first column lists the original content from a parts list of cooking dishes. The term (A) etc. are dimensional measurements that are not relevant to the discussion. The second column lists the chunked terms from an N-gram analysis; the third column lists the frequency of each term in the original content set. The fourth column is the number associated with the chunk terms in column 2. The fifth column is the representation of the first column in terms of the sequence of chunked content. Although not shown, a classification lineage is also associated with each chunk to assist in translation, e.g., by resolving ambiguities.

If the translation of each chunk is stored in another column, and translation rules exist for reassembling the chunks, then the content is translated. It could be listed in another column that would have a direct match or link to the original content. Table 4 lists the normalized and translated normalized content.
